GUI PROTOTYPE ACTIVITY: Simple Java CRUD Profile System

I. General Instructions.

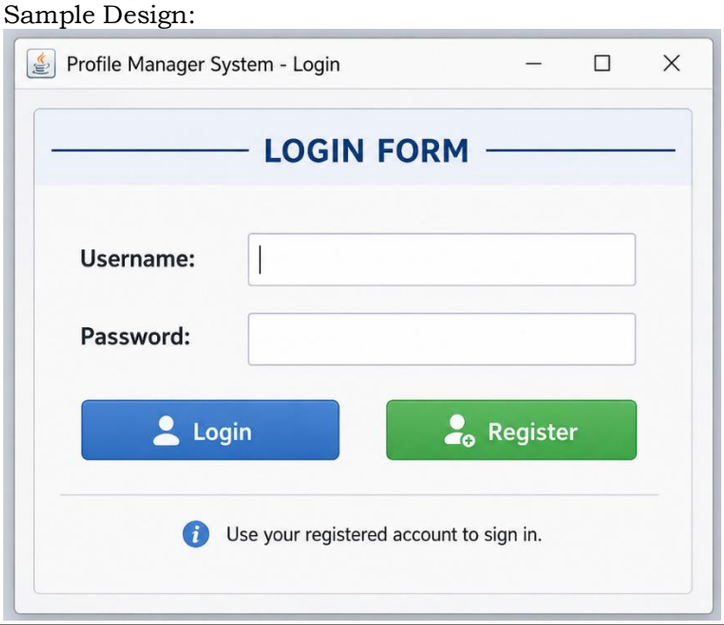

1. Create a group with 3 members.
2. Create a simple prototype design for a Java GUI application.
3. Each group is free to create its own design, layout, colors, fonts, and interface style.

II. Minimum Requirements. Create a design for each of the following forms:

1. Login Form. Create a simple Login Form containing at least:

- Username
- Password
- Login Button

Sample Design:

---

2. Create Profile Provide a way to create or register a new user profile. The group may decide which information will be collected.

Minimum suggested information:

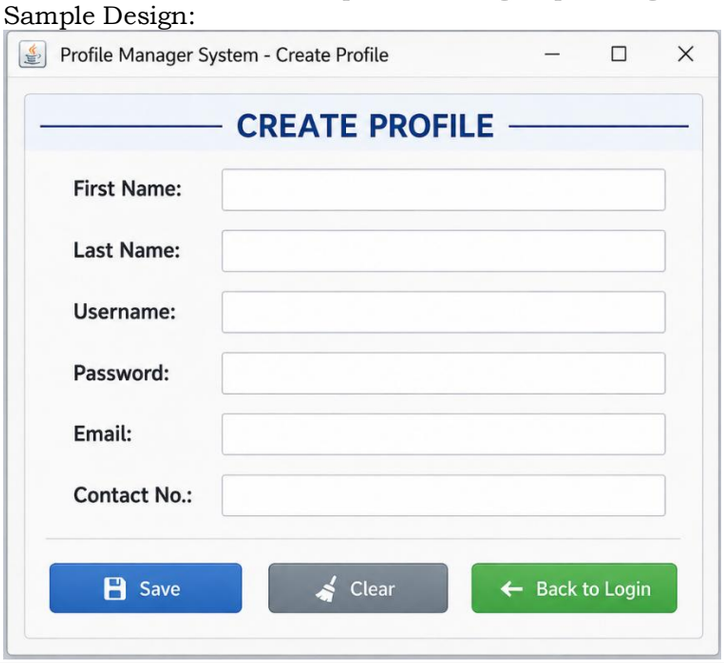

- ✓ First Name
- ✓ Last Name
- ✓ Username
- ✓ Password

Groups may add other fields such as:

- ✓ Email
- ✓ Contact Number
- ✓ Address
- ✓ Age
- ✓ Gender
- ✓ Course
- ✓ Position
- ✓ Profile Picture

The additional fields will depend on the group's design.

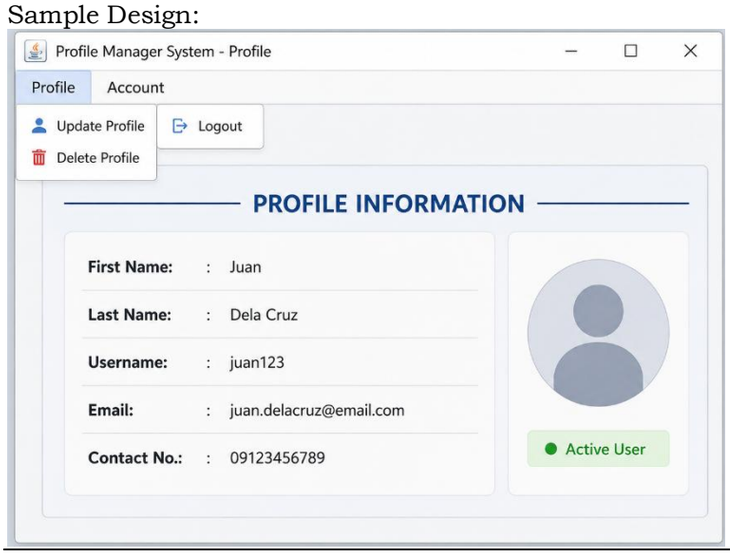

Sample Design:

---

3. Profile Information Frame After a successful login, display the information of the currently logged in user. The layout does not need to look exactly like the example. Groups are encouraged to create their **own profile design**.

Sample Design:

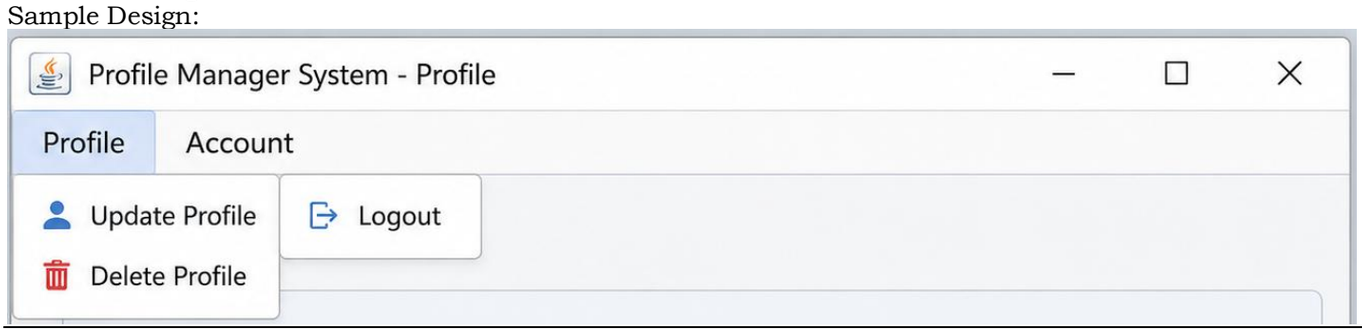

---

4. Menu. The Profile Information Frame must contain a menu that allows the user to perform the required operations. Groups may add other menu items if desired.
At minimum, include:

Profile:
- Update Profile
- Delete Profile

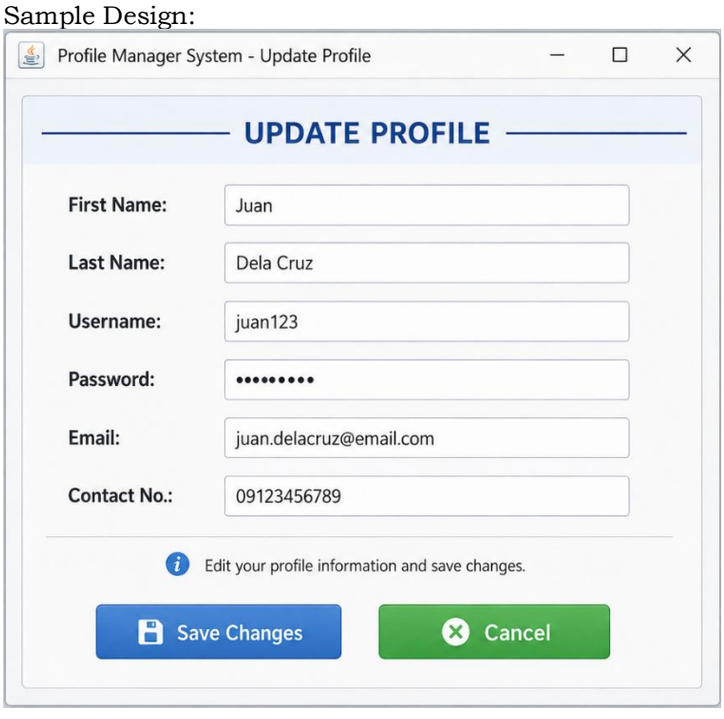

Account:
- Logout

Sample Design:

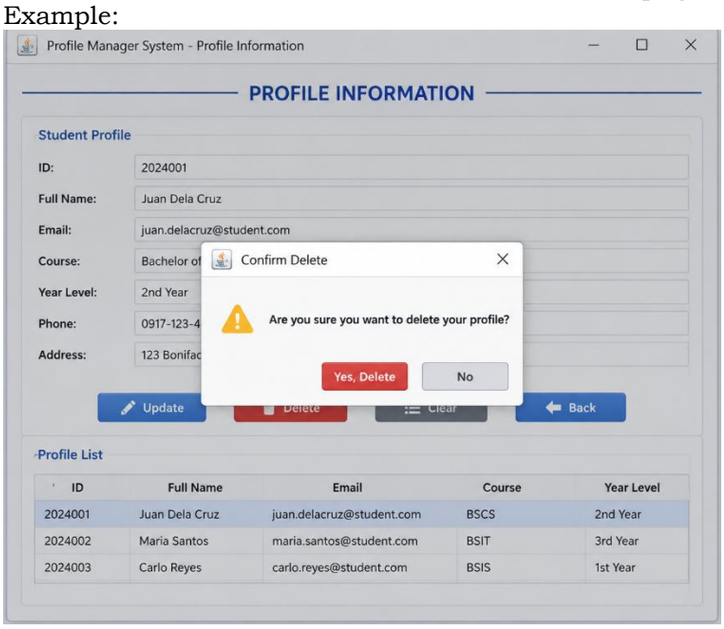

---

5. Update Profile
When the user selects: **Profile > Update Profile**, open a form containing the user's current information. The user should be able to edit the information and save the changes.
Sample Design:

---

6. Delete Profile
When the user selects: **Profile > Delete Profile**, display a confirmation message.
Example:

If the user selects **Yes**:
1. Delete the user's profile from the database.
2. Close the Profile Information Frame.
3. Return to the Login Form.

If the user selects **No**, cancel the operation.

---

7. Logout. When the user selects: **Account > Logout** the system should:
1. close or hide the Profile Information Frame;
2. clear the previous login information; and
3. return to the Login Form.

Logout must **not delete the user's profile**.

III. Design Freedom. There is **NO REQUIRED GUI DESIGN** for this activity.
Each group may decide:

- ✓ JFrame size
- ✓ colors
- ✓ fonts
- ✓ icons
- ✓ profile layout
- ✓ menu design
- ✓ button placement
- ✓ number of profile fields
- ✓ database fields
- ✓ additional features

The important requirement is that the application correctly demonstrates **C**reate, Read, Update, and Delete operations using Java and JDBC.

IV. Submission Instructions. Submit your designs printed in a short bond paper with a title page that contains the name of the group members.

V. Grading Criteria

Criteria	Description	Points
Overall GUI Design and Organization	The interface is clean, organized, readable, visually balanced, and consistent. Appropriate use of colors, fonts, spacing, alignment, labels, and controls is demonstrated.	**20**
Create and Read Interface Design	The Create Profile form is complete and easy to understand. The Profile Information frame presents user information clearly and logically. Required fields and controls are properly arranged.	**20**
Update Interface Design	The Update Profile form clearly presents editable profile information. Input fields, labels, buttons, and layout make the intended update process easy to understand.	**15**
Delete Interface Design	The design clearly shows how a user can initiate profile deletion. An appropriate confirmation dialog or warning is included to prevent accidental deletion.	**15**
Navigation, Menu, and User Experience Design	Menus and navigation are easy to locate and understand. The design provides a logical flow among Login, Create Profile, Profile Information, Update, Delete, and Logout.	**20**
Design Presentation and Group Explanation	The group clearly presents its GUI prototype, explains its design choices, and demonstrates how users are expected to navigate and interact with the proposed system.	**10**
TOTAL		**100**
